CEDAR Audio Ltd

CEDAR Cambridge
System Configuration Notes

Date: 15ᵗʰ January 2007

IMPORTANT: System Configuration

Each CEDAR Cambridge system is carefully configured to optimise audio performance and reliability. It should be run as configured and only updated using CEDAR Cambridge upgrades supplied by CEDAR Audio Ltd.

• No other software should be loaded onto a CEDAR Cambridge system.

• Caution must be exercised if the system is connected to the internet.

Applications:

It is not always apparent to the user, but many software products and downloads install files that are not immediately visible, and some modify settings relating to the host hardware and the Microsoft Windows™ operating system. Such changes may interfere with the correct operation of CEDAR Cambridge. Reinstalling Windows in its standard configuration will not help, and in some cases can lead to the system ceasing to function. In this event, it may be necessary to return the system to CEDAR Audio or its appropriate national dealer for reinstallation. Such returns are not covered by the CEDAR Cambridge warranty, and paragraph 3.1.2 applies:

The Company shall have no liability to remedy any defect, failure, error or malfunction which arises as a result of any improper use, operation or neglect of the System, or any attempt to repair or modify the System by any person other than the Company or a person appointed with the Company's prior written consent.

Consequently, all shipping costs and standard repair charges will be at the owner's expense.

Microsoft Windows updates:

Microsoft releases security updates for its operating systems. If your CEDAR Cambridge system is not connected to the internet, it should not be necessary to install these. If your system is connected to the internet, you should download and install these updates as directed by Microsoft.

On occasion, Microsoft releases new versions of its operating systems. CEDAR Cambridge has been written to run on Windows XP. Before upgrading to any subsequent version, users should contact CEDAR Audio Ltd to verify that the new version of Windows is compatible with the CEDAR Cambridge hardware and applications. If this verification is not obtained, any subsequent problems relating to the installation will fall outside the CEDAR Cambridge warranty, as above.
