RE: CEDAR Cambridge Server:

Upgrading Hardware

Owners of early CEDAR Cambridge host systems may experience performance problems after invoking multiple instances of CEDAR Cambridge for background and/or batch processing.

If so, it would be advisable to upgrade the host system to the latest CEDAR Cambridge 'Q' quad-core host PC. This offers more than double the processing power of any previous hardware revision and is of particular benefit to users who wish to take advantage of the CEDAR Cambridge Server software.
