Re: log4j vulnerability

We are aware of the recently reported vulnerabilities to hacking of the Apache log4j utility.

To the best of our knowledge and belief, the CEDAR Cambridge software is not susceptible to these vulnerabilities. However, if users load 3rd-party software or utilities onto their CEDAR Cambridge host systems we cannot guarantee that they will remain insusceptible. As always, we strongly recommend that users do not load 3rd-party products onto their CEDAR Cambridge systems.
